

## Rematching transponder ECU to Engine ECU after replacement

### Coding transponder ECU

If a transponder ECU is replaced or substituted from another vehicle it must be programmed accordingly. It must be coded to correctly identify the engine type of the vehicle.

The ECU must be coded (using function 07 - Recode ECU) as follows:

Petrol engines and SDI and TDI engines	09600
Diesel engines except SDI and TDI engines	02400
